

Step 2: Choose Your Skateboard Trucks

The width of your truck axle should closely match the width of your deck. Truck size can be measured by the width of the hanger or the width of the axle.

The standard truck height is suitable for most skaters, but you may consider low or high trucks depending on skating style. Low trucks, which provide extra stability for flip tricks, are designed for small wheels (48-55mm). High trucks are great for cruising and carving and are designed for large wheels (56mm+).
